The City of Everett is happy to offer this NEW water conservation workshop for grades 9-12. This workshop is perfect for environmental science and social studies classes and is a 50 minute lesson.

Students learn why a reliable source of water is important and how it supports their lifestyle. Working in small groups, students explore evidence packets that illustrate historic and current water use. They then use this evidence to create an energetic presentation for the class.

Key lesson messages:

- How the water system protects public health
- How the water system provides fire protection
- How the water system supports the economy
- How the water system impacts quality of life
- Why conservation is important

"My students generally had no idea where the water in their homes came from, how it got there, etc. This raised their awareness a great deal." - 9th grade teacher
